It's a single unit suitable for different applications. Level measurements, difference between levels, open channel flow (hydraulic jump) and pumps control. Different measurement functions directly settable via the keyboard. It can be connected to ultrasonic sensors and/or to 4÷20mA level transmitters. It has been developed for the connection to 1 or 2 MODBUS sensors, but it can support up to 8 units if externally powered. A remarkable note is the data logger on removable pen-drive, which enables the total traceability of the measurements. It is particularly suitable for the analysis of the flow rate timing in open channel applications.
